Additional information on hand protection - No tests have been carried out.
The selection of mixtures was made to the best of our knowledge and based on the information provided by the ingredients.
The selection of fabrics was derived from the glove manufacturers' specifications.
The final selection of the glove material must take into account the breakthrough times, permeation rates and degradation.
The selection of a suitable glove depends not only on the material, but also on other quality features and varies from manufacturer to manufacturer.
For mixtures, the resistance of glove materials cannot be calculated in advance and must therefore be checked before use.
The exact breakthrough time of the glove material must be obtained from the protective glove manufacturer and adhered to.
